PROJECTS

CALLSPREE

Front End Developer

Callspre is a LMS built in Angular Framework. I have worked as a front end developer in this project. Using Callspre you can trigger phone calls from any Website, Landing Page or Form. You can convert website leads into phone calls, Fully automate the lead contact process. It has two products, one is Call Widget which allows you to add call widget in your website and second is LeadToCall which allows you to add any kind of Form. User can easily customize call widget, widget popup, leadtocall form, can see advanced analytics in callspre dashboard.

CHARGE BIZZ

Front End & App Developer

Chargebizz is an app for Electric Charging Network which is built in React native Framework. I have worked as a web & app developer in this project. Chargebizz is an Electric Charging Network that allows you to find and book a convenient charging slot near you. Chargebizz not only allows you to find and book slots, but you can start charging your vehicle at the station by just scanning a QR Code. I have also worked in admin dashboard of Chargebizz which allows admin to add multiple charging stations, manage users, bookings many more.

CLEVERLINK

Front End Developer

Cleverlink is a LMS built in Angular Framework. I have worked as a front end developer in this project. It allows you to drive more traffic with every link you share, collect leads, build engagement, generate conversions. It is a smart way to share links & drive conversions. It has 3 products :

- Smart Call to Action - Boost your conversions with easy to attach call to action pop on any link on the internet.
- Smart Forms - You can collect leads from every link you share using smart form popup.
- Shorty, URL shortener - Shorty will shorten the link and lets you collect analytics.
